A new range of disinfectant and cleaning products now available to the UK and Irish aquaculture Industries

UK based aquaculture consultancy company, Patterson Peddie Consulting, has been appointed as the sole agent to promote the CID LINES range of disinfectant products to the UK and Irish aquaculture industries. Dr Scott Peddie, Senior Partner with Patterson Peddie Consulting explained that after thorough R&D and testing in the Norwegian Salmon industry, CID LINES is pleased to offer a fully integrated approach to fish farm biosecurity in the UK and Ireland.

“There are two main disinfectant products CID LINES offers the aquaculture industry”, added Dr Peddie. “Virocid and Kickstart ” are products with proven efficacy against a wide range of bacteria, viruses and fungi. “Such products also have the advantage of being versatile to use, effective in seawater at low temperatures and in the presence of organic matter”, explained Dr Peddie. “Furthermore, their low dilution rates make them a cost-effective hygiene solution for the UK and Irish markets”.

“CID LINES also produce a comprehensive range of cleaning products suitable for use from the farm to the processing factory” continued Dr Peddie.

Further information on the CID LINES product range for aquaculture is available online at: www.pattersonpeddie.com, or www.cidlines.com.

processes. The most stringent quality standards (ISO 9001:2000 and GMP Pharma) are being followed in production and quality assurance. CID LINES currently exports to more than 70 countries in 5 continents. For more information, visit the company website at: www.cidlines.com.
