New Services in Fisheries Management and Environmental Monitoring Announced

Patterson Peddie Consulting has expanded its range of services to incorporate fisheries management and environmental monitoring in association with **Paul Johnston Associates**. The services range from Environmental Impact Assessments, fish population surveys, biological monitoring and fish habitat rehabilitation, to angling and tourism development plans.

Dr Paul Johnston has over 25 years experience in fisheries biology and management. He has previously worked as a project manager for a salmon biology and population dynamics programme, freshwater production manager for a salmon farming company and is currently a freelance fisheries consultant.
